

## Stockwell Academy Curriculum Summary

### Wider Curriculum

- At Stockwell Academy we follow the principles of the ***Learning Challenge Curriculum***.
- The curriculum is built around the principle of greater learner involvement in their work. It focuses on pupils leading and getting involved in their learning, through engagement with a Big Question for each unit.
- Progression in the curriculum is evidenced through the development of key skills and essential knowledge, as well as the teaching of Maths, Writing and Reading basic skills across the whole curriculum.
- Our curriculum is underpinned by our three core values (Imagine, Believe and Achieve) which reflect the needs and values of our whole school community.
- There are opportunities for whole school topics that allow cooperation between year groups, evidence of progression throughout the school and a chance to collaborate with and celebrate our local community.
- Outdoor learning underpins our curriculum ethos and enables children to continue exploring and leading their own learning, building the key skills of independence, resilience and cooperation with others.
